

Project Title:

PSHS GWA Calculator and Tracker

Problem Statement:

Your GWA is based on multiple assessments like quizzes, projects, and exams, each with different weights.

Based on my experience, manually calculating all of these scores can be time-consuming and prone to mistakes, so we made an app to help you with that.

Our GWA Calculator solves this problem by immediately and accurately computing your final grade based on their scores and the assigned weights.

Project Objectives:

The main goal of this app is to help you plan for academics and studying, for example, if you set a goal for yourself like D.L, it would be easier to know which subjects you need to study for because not only does it display your GWA, but it also displays the tentative grades of each subject through another feature called the PSHS Tracker, which displays all your grades in each subject and it displays the lowest on top and the highest on the bottom so you'd immediately know which ones to study for, and the cherry on top is that in the main function, it'll display the GWA with all these grades so you'll know if it's enough to achieve your goal.
